Zhu, Z.Q. p143

AC MACHINES

Condition monitoring of railway electric point machines p465

ACOUSTICS AND ULTRASONICS

Influence of power converter on induction motor acoustic noise: interaction between control strategy and mechanical structure p93
Reduction of audible switching noise in induction motor drives using random position space vector PWM p195
Sound power radiated from an inverter-driven induction motor: experimental investigation p46

ADAPTIVE CONTROL

Adaptive backstepping sliding mode control for linear induction motor drive p184
Adaptive backstepping speed controller design for a permanent magnet synchronous motor p165
Adaptive sliding-mode torque control of a PM synchronous motor p228

ASYNCHRONOUS MACHINES

Adaptive backstepping sliding mode control for linear induction motor drive p184
Comparative study of a sliding-mode observer and Kalman filters for full state estimation in an induction machine p53
Equivalent circuits for cage induction motors with inter-bar currents p173
Generator operations of saturated induction machines p122
Influence of power converter on induction motor acoustic noise: interaction between control strategy and mechanical structure p93
Practical sensorless induction motor drive employing an artificial neural network for online parameter adaptation p255
PWM inverter switching strategy for a dual two-level inverter fed open-end winding induction motor drive with a switched neutral p152
Reduction of audible switching noise in induction motor drives using random position space vector PWM p195
Sound power radiated from an inverter-driven induction motor: experimental investigation p46

CABLES AND OVERHEAD LINES

Wide-band lumped circuit model of the terminal and internal electromagnetic response of a coil with a coaxial insulation system p459

CAPACITORS

Fast, accurate and stable simulation of power electronic systems using virtual resistors and capacitors p385
Flying capacitor multilevel PWM converter based UPFC p304

CIRCUIT COMPONENTS

Fast, accurate and stable simulation of power electronic systems using virtual resistors and capacitors p385

CIRCUIT THEORY AND DESIGN

Fast, accurate and stable simulation of power electronic systems using virtual resistors and capacitors p385
Wide-band lumped circuit model of the terminal and internal electromagnetic response of a coil with a coaxial insulation system p459
Zero-current switching switched-capacitor quasiresonant step-down converter p111

CLOSED LOOP SYSTEMS

Power factor improvement and closed loop control of an AC-to-DC resonant converter p101

CONTROL EQUIPMENT

Transient performance of a short-stroke linear solenoid actuator p379

CONTROL SYSTEM ANALYSIS

Adaptive backstepping speed controller design for a permanent magnet synchronous motor p165
Applications of a mathematical similarity to converter control systems p414
Comparative study of a sliding-mode observer and Kalman filters for full state estimation in an induction machine p53
Fuzzy logic controlled shunt active power filter for power quality improvement p317
Implementation of a single-phase three-leg AC/AC converter with neutral-point diode-clamped scheme p423
Multiobjective PID control for a linear brushless DC motor: An evolutionary approach p397
Parallel operation of capacity-limited three-phase four-wire active power filters p329
Power factor improvement and closed loop control of an AC-to-DC resonant converter p101
Robust output tracking control of a linear brushless DC motor with time-varying disturbances p39
Single-phase shunt active power filter with harmonic detection p343

CONTROL SYSTEM STABILITY

Adaptive backstepping speed controller design for a permanent magnet synchronous motor p165
Applications of a mathematical similarity to converter control systems p414
Comparative study of a sliding-mode observer and Kalman filters for full state estimation in an induction machine p53
Multiobjective PID control for a linear brushless DC motor: An evolutionary approach p397
Robust output tracking control of a linear brushless DC motor with time-varying disturbances p39

CONTROL SYSTEM SYNTHESIS

Adaptive backstepping speed controller design for a permanent magnet synchronous motor p165
Applications of a mathematical similarity to converter control systems p414
Comparative study of a sliding-mode observer and Kalman filters for full state estimation in an induction machine p53
Implementation of a single-phase three-leg AC/AC converter with neutral-point diode-clamped scheme p423
Multiobjective PID control for a linear brushless DC motor: An evolutionary approach p397
Parallel operation of capacity-limited three-phase four-wire active power filters p329
Power factor improvement and closed loop control of an AC-to-DC resonant converter p101
Robust output tracking control of a linear brushless DC motor with time-varying disturbances p39
Single-phase shunt active power filter with harmonic detection p343

DC MACHINES

Condition monitoring of railway electric point machines p465
Multiobjective PID control for a linear brushless DC motor: An evolutionary approach p397
Position detection and start-up algorithm of a rotor in a sensorless BLDC motor utilising inductance variation p137
Robust output tracking control of a linear brushless DC motor with time-varying disturbances p39

DISPLAY TECHNOLOGY

Pulsed voltage-fed sustain circuit for AC plasma display drive p129

DRIVES

Adaptive backstepping sliding mode control for linear induction motor drive p184
Improvement in power quality and a simple method of subharmonic suppression for a cycloconverter-fed synchronous motor drive p292
Practical sensorless induction motor drive employing an artificial neural network for online parameter adaptation p255
PWM inverter switching strategy for a dual two-level inverter fed open-end winding induction motor drive with a switched neutral p152
Reduction of audible switching noise in induction motor drives using random position space vector PWM p195
Sound power radiated from an inverter-driven induction motor: experimental investigation p46

EDDY CURRENTS

Transient performance of a short-stroke linear solenoid actuator p379

ELECTRIC MACHINES

Adaptive backstepping sliding mode control for linear induction motor drive p184
Multiobjective PID control for a linear brushless DC motor: An evolutionary approach p397
Robust output tracking control of a linear brushless DC motor with time-varying disturbances p39

ELECTROMAGNETIC COMPATIBILITY

Sound power radiated from an inverter-driven induction motor: experimental investigation p46

ELECTROMAGNETIC FIELDS

Generator operations of saturated induction machines p122
Matrix approach for the generalised theory of doubly salient reluctance machines p65

ELECTROMAGNETIC INTERFERENCE

Sound power radiated from an inverter-driven induction motor: experimental investigation p46

ELECTROMAGNETISM

Transient performance of a short-stroke linear solenoid actuator p379
Voltage profiles and closures on Rogowski coils p223

ELECTRON TUBES

Pulsed voltage-fed sustain circuit for AC plasma display drive p129

ELECTRIC VARIABLES CONTROL

Applications of a mathematical similarity to converter control systems p414
Current control implementation with deadbeat algorithm for three-phase current-source active power filter p275
Fixed-frequency space-vector-modulation control for three-phase four-leg active power filters p268
Flying capacitor multilevel PWM converter based UPFC p304
Fuzzy logic controlled shunt active power filter for power quality improvement p317
High-power-factor single-phase switch clamped rectifier p208

Implementation of a single-phase three-leg AC/AC converter with neutral-point diode-clamped scheme p423
Parallel operation of capacity-limited three-phase four-wire active power filters p329
Performance, design and control of a series-parallel (CL^2-type) resonant DC/DC converter p360
Power factor improvement and closed loop control of an AC-to-DC resonant converter p101
Sampling effect in continuous-time small-signal modelling of average-current mode control p311
Single-phase half-bridge converter topology for power quality compensation p351
Single-phase neutral point clamped AC/DC converter with the function of power factor corrector and active filter p19
Single-phase neutral-point diode-clamped rectifier with high input power factor p31

ENGINEERING COMPUTING

Current control implementation with deadbeat algorithm for three-phase current-source active power filter p275
Fast, accurate and stable simulation of power electronic systems using virtual resistors and capacitors p385
Fuzzy logic controlled shunt active power filter for power quality improvement p317
Robust output tracking control of a linear brushless DC motor with time-varying disturbances p39

FEEDBACK

Adaptive backstepping speed controller design for a permanent magnet synchronous motor p165

FILTERS AND FILTERING

Fuzzy logic controlled shunt active power filter for power quality improvement p317
Parallel operation of capacity-limited three-phase four-wire active power filters p329
Single-phase shunt active power filter with harmonic detection p343
Zero-current switching switched-capacitor quasiresonant step-down converter p111

FUZZY CONTROL

Fuzzy logic controlled shunt active power filter for power quality improvement p317

INSULATED GATE FIELD EFFECT TRANSISTORS

Auxiliary resonant DC link snubber assisted voltage-source soft switching inverter with space zero voltage vector generation method p337
Unity power factor boost converter with phase shifted parallel IGBT operation for medium power applications p237

INSULATORS AND INSULATION

Equivalent heat circuit based power transformer thermal model p87
Wide-band lumped circuit model of the terminal and internal electromagnetic response of a coil with a coaxial insulation system p459

MATHEMATICAL TECHNIQUES

Computation of average values of synchronously sampled signals p217
Equivalent circuits for cage induction motors with inter-bar currents p173
Transient behaviour of salient-pole synchronous machines with internal stator winding faults p143

MEASUREMENT OF SPECIFIC VARIABLES

Computation of average values of synchronously sampled signals p217
Influence of power converter on induction motor acoustic noise: interaction between control strategy and mechanical structure p93
Position detection and start-up algorithm of a rotor in a sensorless BLDC motor utilising inductance variation p137
Sound power radiated from an inverter-driven induction motor: experimental investigation p46
Voltage profiles and closures on Rogowski coils p223

MICROPROCESSORS

Current control implementation with deadbeat algorithm for three-phase current-source active power filter p275
Fuzzy logic controlled shunt active power filter for power quality improvement p317

MULTIVARIABLE CONTROL SYSTEMS

Adaptive backstepping sliding mode control for linear induction motor drive p184
Adaptive sliding-mode torque control of a PM synchronous motor p228
Comparative study of a sliding-mode observer and Kalman filters for full state estimation in an induction machine p53

NEURAL NETWORKS

Practical sensorless induction motor drive employing an artificial neural network for online parameter adaptation p255
Single-phase shunt active power filter with harmonic detection p343

NONELECTRIC VARIABLES CONTROL

Adaptive backstepping sliding mode control for linear induction motor drive p184
Adaptive backstepping speed controller design for a permanent magnet synchronous motor p165
Adaptive sliding-mode torque control of a PM synchronous motor p228

NUMERICAL ANALYSIS

Analysis of transformer leakage inductance and overlap effects in the series-parallel resonant converter p407
Computation of average values of synchronously sampled signals p217
Matrix approach for the generalised theory of doubly salient reluctance machines p65
Position detection and start-up algorithm of a rotor in a sensorless BLDC motor utilising inductance variation p137
Robust output tracking control of a linear brushless DC motor with time-varying disturbances p39
Study of the mutually coupled switched reluctance machine using the finite element-circuit coupled method p81
Transient performance of a short-stroke linear solenoid actuator p379

OPTIMAL CONTROL

Robust output tracking control of a linear brushless DC motor with time-varying disturbances p39

OPTIMISATION

Online torque-ripple minimisation in a switched reluctance motor over a wide speed range p261

PARAMETER ESTIMATION

Practical sensorless induction motor drive employing an artificial neural network for online parameter adaptation p255

PLASMA TECHNOLOGY

Pulsed voltage-fed sustain circuit for AC plasma display drive p129

POWER CONVERTERS

AC-LFR concept applied to modular photovoltaic power conversion chains p441
Analysis and design of asymmetrical half bridge flyback converter p433
Analysis of transformer leakage inductance and overlap effects in the series-parallel resonant converter p407
Applications of a mathematical similarity to converter control systems p414
Auxiliary resonant DC link snubber assisted voltage-source soft switching inverter with space zero voltage vector generation method p337
Current control implementation with deadbeat algorithm for three-phase current-source active power filter p275
Fast, accurate and stable simulation of power electronic systems using virtual resistors and capacitors p385
Flyback-forward power factor correction circuit with line-frequency ripple suppression p474
Flying capacitor multilevel PWM converter based UPFC p304
High-power-factor single-phase switch clamped rectifier p208
Implementation of a single-phase three-leg AC/AC converter with neutral-point diode-clamped scheme p423
Improvement in power quality and a simple method of subharmonic suppression for a cycloconverter-fed synchronous motor drive p292
Influence of power converter on induction motor acoustic noise: interaction between control strategy and mechanical structure p93
Investigation and verification of a cascade double Γ-CL current source resonant inverter p369
Minimisation of power losses in PFC flyback converters operating in the continuous conduction mode p283
Multi-level voltage sourced conversion by voltage reinjection at six times the fundamental frequency p201
Multiple-quadrant Luo-converters p9
Parallel operation of capacity-limited three-phase four-wire active power filters p329
Performance, design and control of a series-parallel (CL^2-type) resonant DC/DC converter p360
Power factor improvement and closed loop control of an AC-to-DC resonant converter p101
Pulsed voltage-fed sustain circuit for AC plasma display drive p129
PWM inverter switching strategy for a dual two-level inverter fed open-end winding induction motor drive with a switched neutral p152
Reducing the high frequency transformer losses in an FB ZVT PWM converter p161
Reduction of audible switching noise in induction motor drives using random position space vector PWM p195
Sampling effect in continuous-time small-signal modelling of average-current mode control p311
Single-phase half-bridge converter topology for power quality compensation p351
Single-phase neutral point clamped AC/DC converter with the function of power factor corrector and active filter p19
Single-phase neutral-point diode-clamped rectifier with high input power factor p31
Single-stage asymmetrical PWM AC-DC converter with high power factor p1
Sound power radiated from an inverter-driven induction motor: experimental investigation p46
Topology for hybrid multilevel inverter p449
Unity power factor boost converter with phase shifted parallel IGBT operation for medium power applications p237
Zero-current switching switched-capacitor quasiresonant step-down converter p111

POWER ELECTRONICS

Analysis and design of asymmetrical half bridge flyback converter p433
Auxiliary resonant DC link snubber assisted voltage-source soft switching inverter with space zero voltage vector generation method p337
Fast, accurate and stable simulation of power electronic systems using virtual resistors and capacitors p385
Unity power factor boost converter with phase shifted parallel IGBT operation for medium power applications p237

POWER ENGINEERING COMPUTING

Fast, accurate and stable simulation of power electronic systems using virtual resistors and capacitors p385
Fuzzy logic controlled shunt active power filter for power quality improvement p317

Multi-level voltage sourced conversion by voltage reinjection at six times the fundamental frequency p201
Practical sensorless induction motor drive employing an artificial neural network for online parameter adaptation p255
Robust output tracking control of a linear brushless DC motor with time-varying disturbances p39

POWER SYSTEM CONTROL

Adaptive backstepping sliding mode control for linear induction motor drive p184
Adaptive backstepping speed controller design for a permanent magnet synchronous motor p165
Adaptive sliding-mode torque control of a PM synchronous motor p228
Applications of a mathematical similarity to converter control systems p414
Comparative study of a sliding-mode observer and Kalman filters for full state estimation in an induction machine p53
Current control implementation with deadbeat algorithm for three-phase current-source active power filter p275
Fixed-frequency space-vector-modulation control for three-phase four-leg active power filters p268
Flying capacitor multilevel PWM converter based UPFC p304
Fuzzy logic controlled shunt active power filter for power quality improvement p317
High-power-factor single-phase switch clamped rectifier p208
Implementation of a single-phase three-leg AC/AC converter with neutral-point diode-clamped scheme p423
Influence of power converter on induction motor acoustic noise: interaction between control strategy and mechanical structure p93
Multiobjective PID control for a linear brushless DC motor: An evolutionary approach p397
Online torque-ripple minimisation in a switched reluctance motor over a wide speed range p261
Parallel operation of capacity-limited three-phase four-wire active power filters p329
Performance, design and control of a series-parallel (CL^2-type) resonant DC/DC converter p360
Power factor improvement and closed loop control of an AC-to-DC resonant converter p101
Practical sensorless induction motor drive employing an artificial neural network for online parameter adaptation p255
Robust output tracking control of a linear brushless DC motor with time-varying disturbances p39
Sampling effect in continuous-time small-signal modelling of average-current mode control p311
Single-phase half-bridge converter topology for power quality compensation p351
Single-phase neutral point clamped AC/DC converter with the function of power factor corrector and active filter p19
Single-phase neutral-point diode-clamped rectifier with high input power factor p31
Single-phase shunt active power filter with harmonic detection p343

POWER SYSTEM MANAGEMENT

Power factor improvement and closed loop control of an AC-to-DC resonant converter p101
Single-phase neutral point clamped AC/DC converter with the function of power factor corrector and active filter p19
Unity power factor boost converter with phase shifted parallel IGBT operation for medium power applications p237

POWER SYSTEMS AND PLANTS

AC-LFR concept applied to modular photovoltaic power conversion chains p441
Current control implementation with deadbeat algorithm for three-phase current-source active power filter p275
Fixed-frequency space-vector-modulation control for three-phase four-leg active power filters p268
Fuzzy logic controlled shunt active power filter for power quality improvement p317
Parallel operation of capacity-limited three-phase four-wire active power filters p329
Single-phase neutral point clamped AC/DC converter with the function of power factor corrector and active filter p19
Single-phase shunt active power filter with harmonic detection p343

POWER TRANSMISSION AND DISTRIBUTION

Current control implementation with deadbeat algorithm for three-phase current-source active power filter p275
Fixed-frequency space-vector-modulation control for three-phase four-leg active power filters p268
Flying capacitor multilevel PWM converter based UPFC p304
Fuzzy logic controlled shunt active power filter for power quality improvement p317
Investigation and verification of a cascade double Γ-CL current source resonant inverter p369
Parallel operation of capacity-limited three-phase four-wire active power filters p329
Single-phase half-bridge converter topology for power quality compensation p351
Single-phase neutral point clamped AC/DC converter with the function of power factor corrector and active filter p19
Single-phase neutral-point diode-clamped rectifier with high input power factor p31
Single-phase shunt active power filter with harmonic detection p343

SELF-ADJUSTING SYSTEMS

Adaptive backstepping sliding mode control for linear induction motor drive p184
Adaptive backstepping speed controller design for a permanent magnet synchronous motor p165
Adaptive sliding-mode torque control of a PM synchronous motor p228

SEMICONDUCTOR DEVICES

Auxiliary resonant DC link snubber assisted voltage-source soft switching inverter with space zero voltage vector generation method p337
Unity power factor boost converter with phase shifted parallel IGBT operation for medium power applications p237

SIGNAL PROCESSING

Computation of average values of synchronously sampled signals p217

SIMULATION, MODELLING AND IDENTIFICATION

Comparative study of a sliding-mode observer and Kalman filters for full state estimation in an induction machine p53
Practical sensorless induction motor drive employing an artificial neural network for online parameter adaptation p255

SYNCHRONOUS MACHINES

Adaptive backstepping speed controller design for a permanent magnet synchronous motor p165
Adaptive sliding-mode torque control of a PM synchronous motor p228
Improvement in power quality and a simple method of subharmonic suppression for a cycloconverter-fed synchronous motor drive p292
Matrix approach for the generalised theory of doubly salient reluctance machines p65
Online torque-ripple minimisation in a switched reluctance motor over a wide speed range p261
Study of the mutually coupled switched reluctance machine using the finite element-circuit coupled method p81
Switched reluctance motors with segmental rotors p245
Transient behaviour of salient-pole synchronous machines with internal stator winding faults p143

TRANSFORMERS

Analysis of transformer leakage inductance and overlap effects in the series-parallel resonant converter p407
Equivalent heat circuit based power transformer thermal model p87
Power factor improvement and closed loop control of an AC-to-DC resonant converter p101
Reducing the high frequency transformer losses in an FB ZVT PWM converter p161
Single-stage asymmetrical PWM AC-DC converter with high power factor p1
Voltage profiles and closures on Rogowski coils p223
Wide-band lumped circuit model of the terminal and internal electromagnetic response of a coil with a coaxial insulation system p459

TRANSPORTATION

Condition monitoring of railway electric point machines p465
